List of figures and tables	12
Acknowledgements	14
1 Introduction	16
1.1 The astrolabe and medieval mathematical thought	16
1.2 The astrolabe and its aspects	17
1.3 The early history of the astrolabe	19
1.4 Latin scholars and the astrolabe	20
1.5 The two main theses of this study	21
1.6 Strategies of knowledge transfer: positive and negative definitions ...	22
1.7 Images of knowledge as premise and subject of research	23
1.8 Plan of the work	24
2 Mathematical and practical aspects of the astrolabe	27
2.1 Some considerations on mathematical thinking	27
2.1.1 Mathematical thinking as a set of prototypes	27
2.1.2 Mathematics across cultures and time	27
2.1.3 Mathematical thinking and mathematical communication	28
2.1.4 Geometrical imagination	29
2.1.5 Mathematics, the mind's eye... and hands	30
2.1.6 Images of knowledge and mathematical truth: proof vs. evidence	32
2.1.7 Geometrical imagination and 'tacit knowing'	33
2.2 The mathematical aspects of the astrolabe	34
2.2.1 The shadow triangle	34
2.2.2 The homocentric-spheres-model	35
2.2.2.1 The celestial and terrestrial spheres	35
2.2.2.2 Geometrical imagination and natural philosophy in the homocentric-spheres-model	36
2.2.2.3 From the solid spheres to the astrolabe	37
2.2.2.4 The poles and equator	37
2.2.2.5 The horizon and the altitude circles	38
2.2.2.6 The sun and the zodiac	39
2.2.2.7 Zodiac signs and constellations	40
2.2.2.8 Seasonal variations in the length of daylight and in the night sky	41
2.2.2.9 The seven climates	41
2.2.3 The flat sphere	43

2.2.3.1	Theses to be demonstrated by means of my description of the flat sphere's structure	43
2.2.3.2	The general method for flattening the sphere	44
2.2.3.3	How to draw the flat sphere: the equator and the north pole	44
2.2.3.4	The tropics on the flat sphere	45
2.2.3.5	Ninety-degrees-tilting as a key trick in drawing the flat sphere	45
2.2.3.6	The circle-into-circle property	48
2.2.3.7	Consequences of the circle-into-circle property	48
2.2.3.8	The zodiac and the horizons	49
2.2.3.9	Conclusions: the basic three-step-procedure for projecting circles onto the flat sphere	51
2.3	The practical aspects of the astrolabe	53
2.3.1	The planispheric astrolabe	53
2.3.2	The back of the planispheric astrolabe	54
2.3.2.1	The alidade as a sighting tool	54
2.3.2.2	The shadow square	54
2.3.2.3	The scale of solar longitudes	56
2.3.3	The front of the planispheric astrolabe	57
2.3.3.1	The disc of the celestial sphere and the disc of the local horizon	57
2.3.3.2	The collection of horizon plates	57
2.3.3.3	Possible uses of the front of the planispheric astrolabe	59
2.3.3.4	The hour lines and monastic timekeeping	60
2.3.4	Could astrolabe artefacts actually perform the functions they were built for?	62
3	Sources and results of previous research	63
3.1	Introduction: historical and cultural context	63
3.1.1	The earliest evidence on the method of the flat sphere and on the astrolabe	63
3.1.2	The astrolabe in the Arabic-Islamic, Byzantine and Jewish cultures	64
3.1.3	The network of high medieval astronomical and mathematical studies	66
3.1.4	al-Andalus, its school of astronomy of the tenth and eleventh centuries	67
3.1.5	Prominent figures in the diffusion of astrolabe knowledge in Latin Europe	69
3.1.6	The interplay of modes of communication in the Latin Middle Ages	70
3.1.7	The 'rise of literacy' in eleventh- and twelfth-century Europe	72

3.2	Material and pictorial sources: catalogues, analyses and open questions	73
3.2.1	Arabic-Islamic and European astrolabe artefacts	73
3.2.2	The Frankfurt catalogue of medieval astronomical instruments and previous cataloguing projects	74
3.2.3	Difficulties in dating European astrolabe artefacts	75
3.2.4	European astrolabe artefacts and astrolabe drawings used as evidence in this study	75
3.2.5	The earliest European astrolabe (#3042)	76
3.2.6	Early Andalusí astrolabe artefacts with additional non-Arabic engravings as evidence of cultural exchange	77
3.2.7	Additional pictorial sources	79
3.3	Textual sources: research results and open questions	79
3.3.1	Extant astrolabe manuscripts	79
3.3.2	Astrolabe manuscripts as a source for this study	80
3.3.3	Additional textual evidence	80
3.3.4	Preliminary remarks on earlier and later Latin texts on the astrolabe	81
3.3.5	The reconstruction of eleventh-century astrolabe texts	82
3.3.6	Problems in the philological reconstruction of the earliest Latin astrolabe texts: the example of J	83
3.3.6.1	Nicolaus Bubnov's edition of 'de utilitatibus astrolabii' (J)	83
3.3.6.2	André Van de Vyver's analysis of the earliest Latin astrolabe manuscripts	85
3.3.6.3	Millás Vallicrosa's studies on ms. Ripoll 225	85
3.3.6.4	Millás Vallicrosa's edition of early astrolabe texts	86
3.3.6.5	Werner Bergmann's thesis of the two-stages composition of J	87
3.3.7	The sources of h : the problem of the lost original?	88
3.3.8	The problem of relating the earliest Latin astrolabe texts to Arabic sources	89
3.3.9	Paul Kunitzsch's analysis of the relationship of the text J' to Arabic sources	90
3.3.10	Conclusions: the theory of written transmission of astrolabe knowledge and its problems	91
3.4	Medieval mathematical texts and readability: the example of the 'Geometria incerti auctoris' (GIA)	92
3.4.1	Catherine Jacquemard's analysis of the GIA and its relevance for the present study	92
3.4.2	The GIA as product of progressive rewriting	93
3.4.3	Were the single stages of rewriting of the GIA III an individual or a collective enterprise?	94

3.4.4	The question of readability and its possible solutions: the literary and the ‘recipe’ style	95
3.4.5	Conclusions: different criteria for evaluating eleventh-century astrolabe texts	97
4	Non-written and non-verbal modes of communication in the diffusion of astrolabe knowledge	99
4.1	Memory, notes and geometrical patterns in high medieval mathematical arts	99
4.1.1	The main thesis of the present chapter: astrolabe manuscripts as written traces of a primarily non-written transmission	99
4.1.2	The medieval craft of memory	100
4.1.3	The embodiment of mnemonic patterns in images and artefacts	101
4.1.4	Memory and medieval learning	103
4.1.5	Modes of communication in the medieval mathematical arts	104
4.1.6	Thinking numbers as geometrical patterns	105
4.1.7	Conclusions: quadrivium, memory and manual crafts	108
4.2	Memory and the astrolabe	109
4.2.1	Memory in astrolabe-related texts	109
4.2.2	Note-taking as a complement to memory	111
4.2.3	Fulbert of Chartres’ mnemonic verses and the letters of Radulf of Liège and Regimbold of Cologne	112
4.3	Drawings as a mode of transmission of astronomical knowledge	113
4.3.1	Astronomy in number and/or in measure	113
4.3.2	Diagrams as an independent mode of communication	114
4.3.3	Stereographic projection in ninth-century astronomic diagrams	115
4.3.4	The astronomical diagrams of Abbo of Fleury and Byrtferth of Ramsey, the astronomical devices of Gerbert of Aurillac	117
4.4	Drawings and knowledge transmission: the construction of tropics and zodiac	118
4.4.1	The sources: texts h1 , h2 and h3 and drawings d1 and d2	118
4.4.2	Relationship between the strictly verbal contents of h1 , h2 and h3	119
4.4.3	The construction of tropics and zodiac in the text h2 and in the drawing d1	120
4.4.4	The construction of the tropics in h3 : a product of notetaking?.....	124
4.4.5	Comparison of the manuscript tradition of h2 and h3	126
4.4.6	The construction of tropics and zodiac in h1	126

4.4.7	Conclusions: transfer of astrolabe knowledge by means of memory, drawings and notes	128
4.5	The relationship between Ptolemy's 'Planisphaerium' and early Latin astrolabe texts and drawings	129
4.5.1	Greek, Latin and Arabic version of the 'Planisphaerium'	129
4.5.2	Relevance of the 'Planisphaerium' for this study	130
4.5.3	What Ptolemy did not say in the 'Planisphaerium'	131
4.5.4	The contents of the 'Planisphaerium'	131
4.5.5	The construction of tropics and zodiac in the 'Planisphaerium'	132
4.5.6	The coincidence between dl and the drawing illustrating chapter 1 of the 'Planisphaerium'	134
4.6	The division of the astrolabe's zodiac in eleventh-century Latin Europe	137
4.6.1	The measure of the zodiac	139
4.6.2	The division of the zodiac in the text dz1	140
4.6.3	The division of the zodiac in the texts dz2 , dz3 and dz4	143
4.6.4	The division of the zodiac in the text 'Iubet rex Ptolomeus' (pt)	144
4.6.5	The division of the zodiac in the text h1	146
4.6.6	The language of proportions in pt and h1	147
4.6.7	The division of the zodiac in the treatises of Ascelin of Augsburg (a) and Herman of Reichenau (h)	148
4.6.8	The division of the zodiac in eleventh-century drawings of astrolabe parts	149
4.6.9	Conclusions: the problem of dividing the astrolabe's zodiac as a focus of natural philosophical discussion in high medieval astrolabe studies	153
4.6.10	The zodiac circle on the astrolabe #3042	154
4.6.11	The division of the zodiac on the astrolabe #3042	155
5	The philosophical aspects of the astrolabe	158
5.1	Why did medieval Latin scholars study the astrolabe?	158
5.1.1	The astrolabe as a new mathematical and philosophical instrument of the mathematical arts	158
5.1.2	The main thesis of the present chapter: the astrolabe as 'architectonica ratio'	160
5.1.3	Was there actually an interplay between abstract and material side in astrolabe studies?	162
5.1.4	Evidence on medieval sundials	164
5.1.5	Evidence on gnomons and sundials as devices for astronomical observations	165
5.1.6	The analysis of ms. BnF lat. 7412 as evidence on the motivation of Latin astrolabe studies	166
5.2	The astrolabe as 'architectonica ratio' of the 'machina mundi'	166

5.2.1	The first chapter of the text J : the ‘machina mundi’ and its ‘architectonica ratio’	166
5.2.2	The Prologue ‘Ad intimas’ (pa) and its possible relation to Vitruvius	168
5.2.3	The ‘architectonica ratio’ of the astrolabe as a forbidden art	173
5.2.4	Chapters J 2–7 : determining temporal hours with the astrolabe	174
5.2.5	Was the gesture of raising the astrolabe a recipe or a symbolic act?	175
5.3	The astrolabe and the measure of time and space	176
5.3.1	The measure of time as a philosophical problem	176
5.3.2	Chapter J 8 : the astrolabe and the parts of the hours	177
5.3.3	The assimilation of temporal and equinoctial hours	178
5.3.4	The order of the sky and its projection on earth: the seven climates	180
5.3.5	The three-dimensional sphere and the measure of time (J'a)	181
5.3.6	Abstract patterns and their embodiment in astronomical devices and surveying methods	183
5.3.7	The sinker and the astrolabe (dpp)	184
5.3.8	The traces of the ‘Planisphaerium’ in ms. BnF lat. 7412	187
5.4	Euclid’s and Ptolemy’s geometric constructions	188
5.4.1	The drawings in ms. BnF lat. 7412 and the knowledge they conveyed	188
5.4.2	Drawings from Euclid’s ‘Elements’ (f.14v)	188
5.4.3	Drawing from the ‘Planisphaerium’ (f.14v)	189
5.4.4	Drawings of a sphere with sighting tubes and of a polar sighting tube (f.15r)	192
5.4.5	The universal horary quadrant: text and drawing (f.16r and f. 18v–19r)	195
5.5	The equatorial sundial and the geometrisation of the flow of time	197
5.5.1	The equatorial sundial (f. 19r)	197
5.5.2	Material evidence for high medieval equatorial sundials.....	200
5.5.3	Written evidence of high medieval equatorial sundials.....	201
5.6	The astrolabe drawings in ms. BnF lat. 7412 (#4024)	203
5.6.1	Overview on the astrolabe drawings #4024	203
5.6.2	The astrolabe drawings #4024 and other early European astrolabe artefacts	206
5.6.3	Abraham and his astrolabe in BnF lat. 12117 f. 106r	210
6	Summary and outlook: the aspects of the astrolabe in twelfth-century Europe	214
6.1	The aspects of the astrolabe and their interplay	214
6.2	Twelfth-century astrolabe treatises and their fortunes	216

6.3 The astronomer with astrolabe in Oxf. Bodl. 614, f.35r	218
6.4 The astrolabe as a symbol	219
6.5 Working knowledge in astrolabe lore	221
6.6 Working knowledge, forbidden knowledge and the written word	222
6.7 The astrolabe as a model to be imitated and the development of astronomical clocks	223
7 Appendix A: Eleventh- and twelfth-century manuscripts containing astrolabe texts and/or drawings	226
8 Appendix B: Thirteenth-, fourteenth- and fifteenth-century manuscripts containing eleventh- and twelfth-century astrolabe texts	233
9 Appendix C: Abbreviations used in this work to indicate eleventh-century astrolabe-related texts and drawings	238
10 Appendix D: Most diffused twelfth-century astrolabe treatises	240
11 Appendix E: Contents of the manuscript Paris, BnF lat. 7412, f. 1r-23v (11th c.)	242
12 Appendix F: Astrolabe artefacts and astrolabe drawings discussed in this study	244
13 Bibliography	246
Name index	267
Subject index	269
